

Ghada Ibrahim

Data Analyst

About Me

Hi, I'm Ghada Ibrahim, a Freelance Data Analyst dedicated to helping businesses turn raw data into clear, actionable insights . I believe that data is only valuable when it tells a story so that I build professional dashboards that help business owners make smarter, faster decisions .

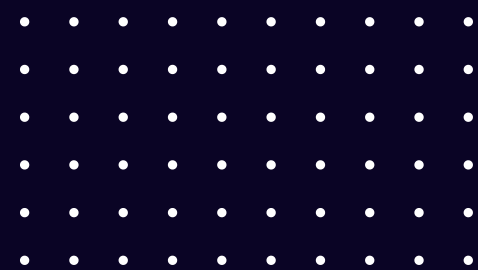

What I bring to your project :

- Data Cleaning and Analysis : Using SQL and Python to handle and process complex datasets .
- Professional Visualization: Creating interactive dashboards in Power BI and Excel Data-Driven
- Recommendations: Delivering insights to solve business problems and drive growth.

EDUCATION

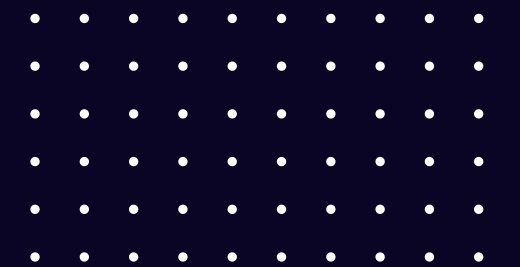

Faculty of Specific
Education at Zagazig
University 2019 - 2022

Skills

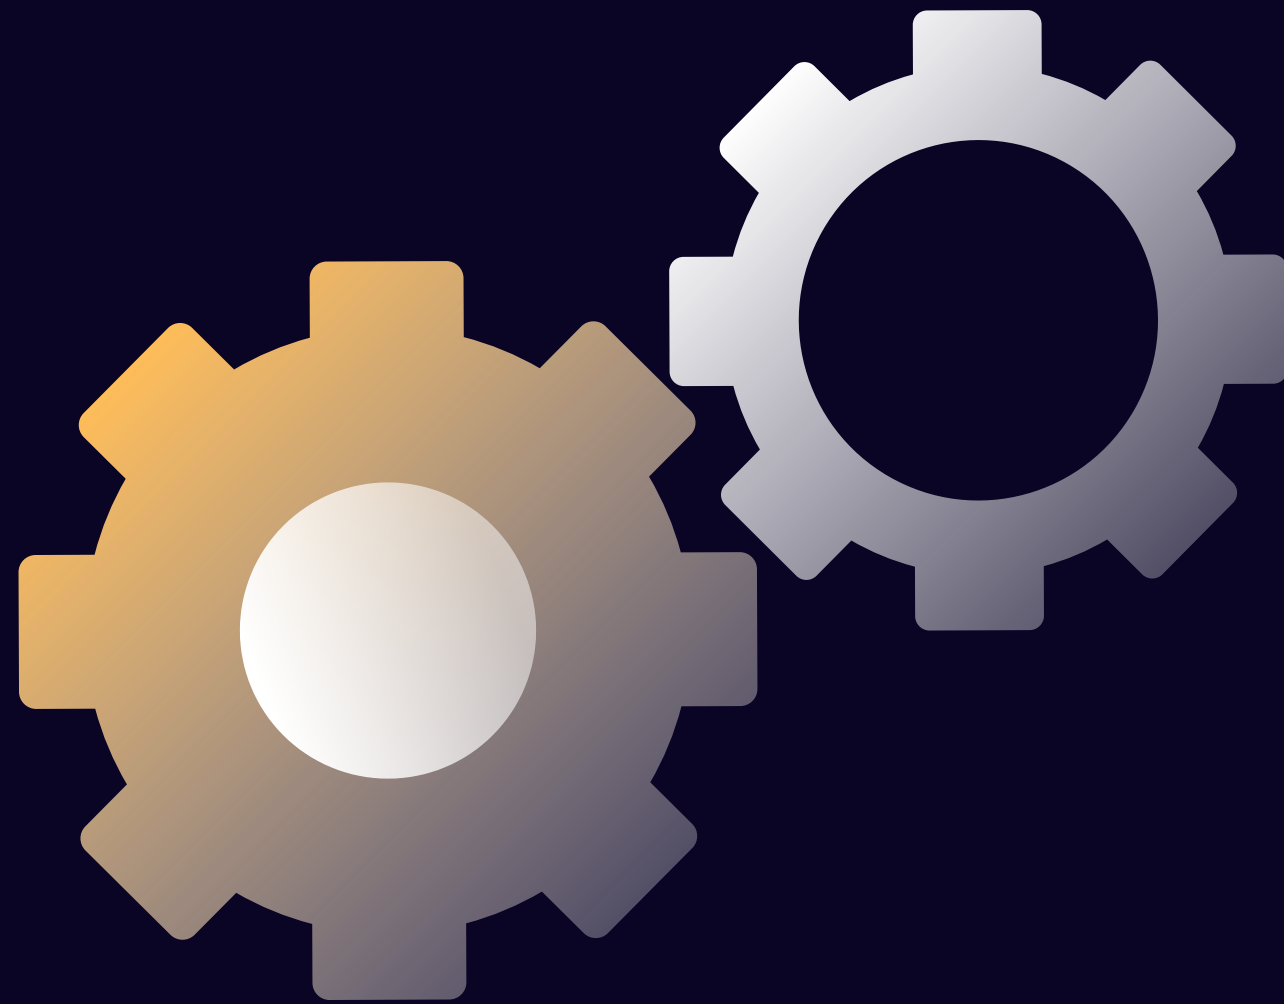

- Sql
- python
- Excel
- Power BI
- Analysis
- presentations
- Reporting
- Problem solving

Tools Used

- **sql** (data cleaning)
- **Power BI** (visualization)
- **Excel** (Preprocessing)
- **Python** (Predictive)

Services

- Data Cleaning
- Data Analysis
- Data Visualization
- Reporting
- Data Entry

Customer Churn Analysis Project (Case Study)

Analyze churn data

work on Customer Churn Analysis project :I analyzed a churn dataset to help a company understand why customers were leaving. First, I used SQL for deep data cleaning and preparation. Then, I used Power BI to create an interactive dashboard, building complex measures and visuals to identify key trends. I also used Python and Excel to build a predictive model for future churn.

Identify KPI Insights

- females and seniors had the highest churn rates.
- Many users were on none and 6-month contracts.
- Fiber internet users were also leaving at a high rate due to service issues

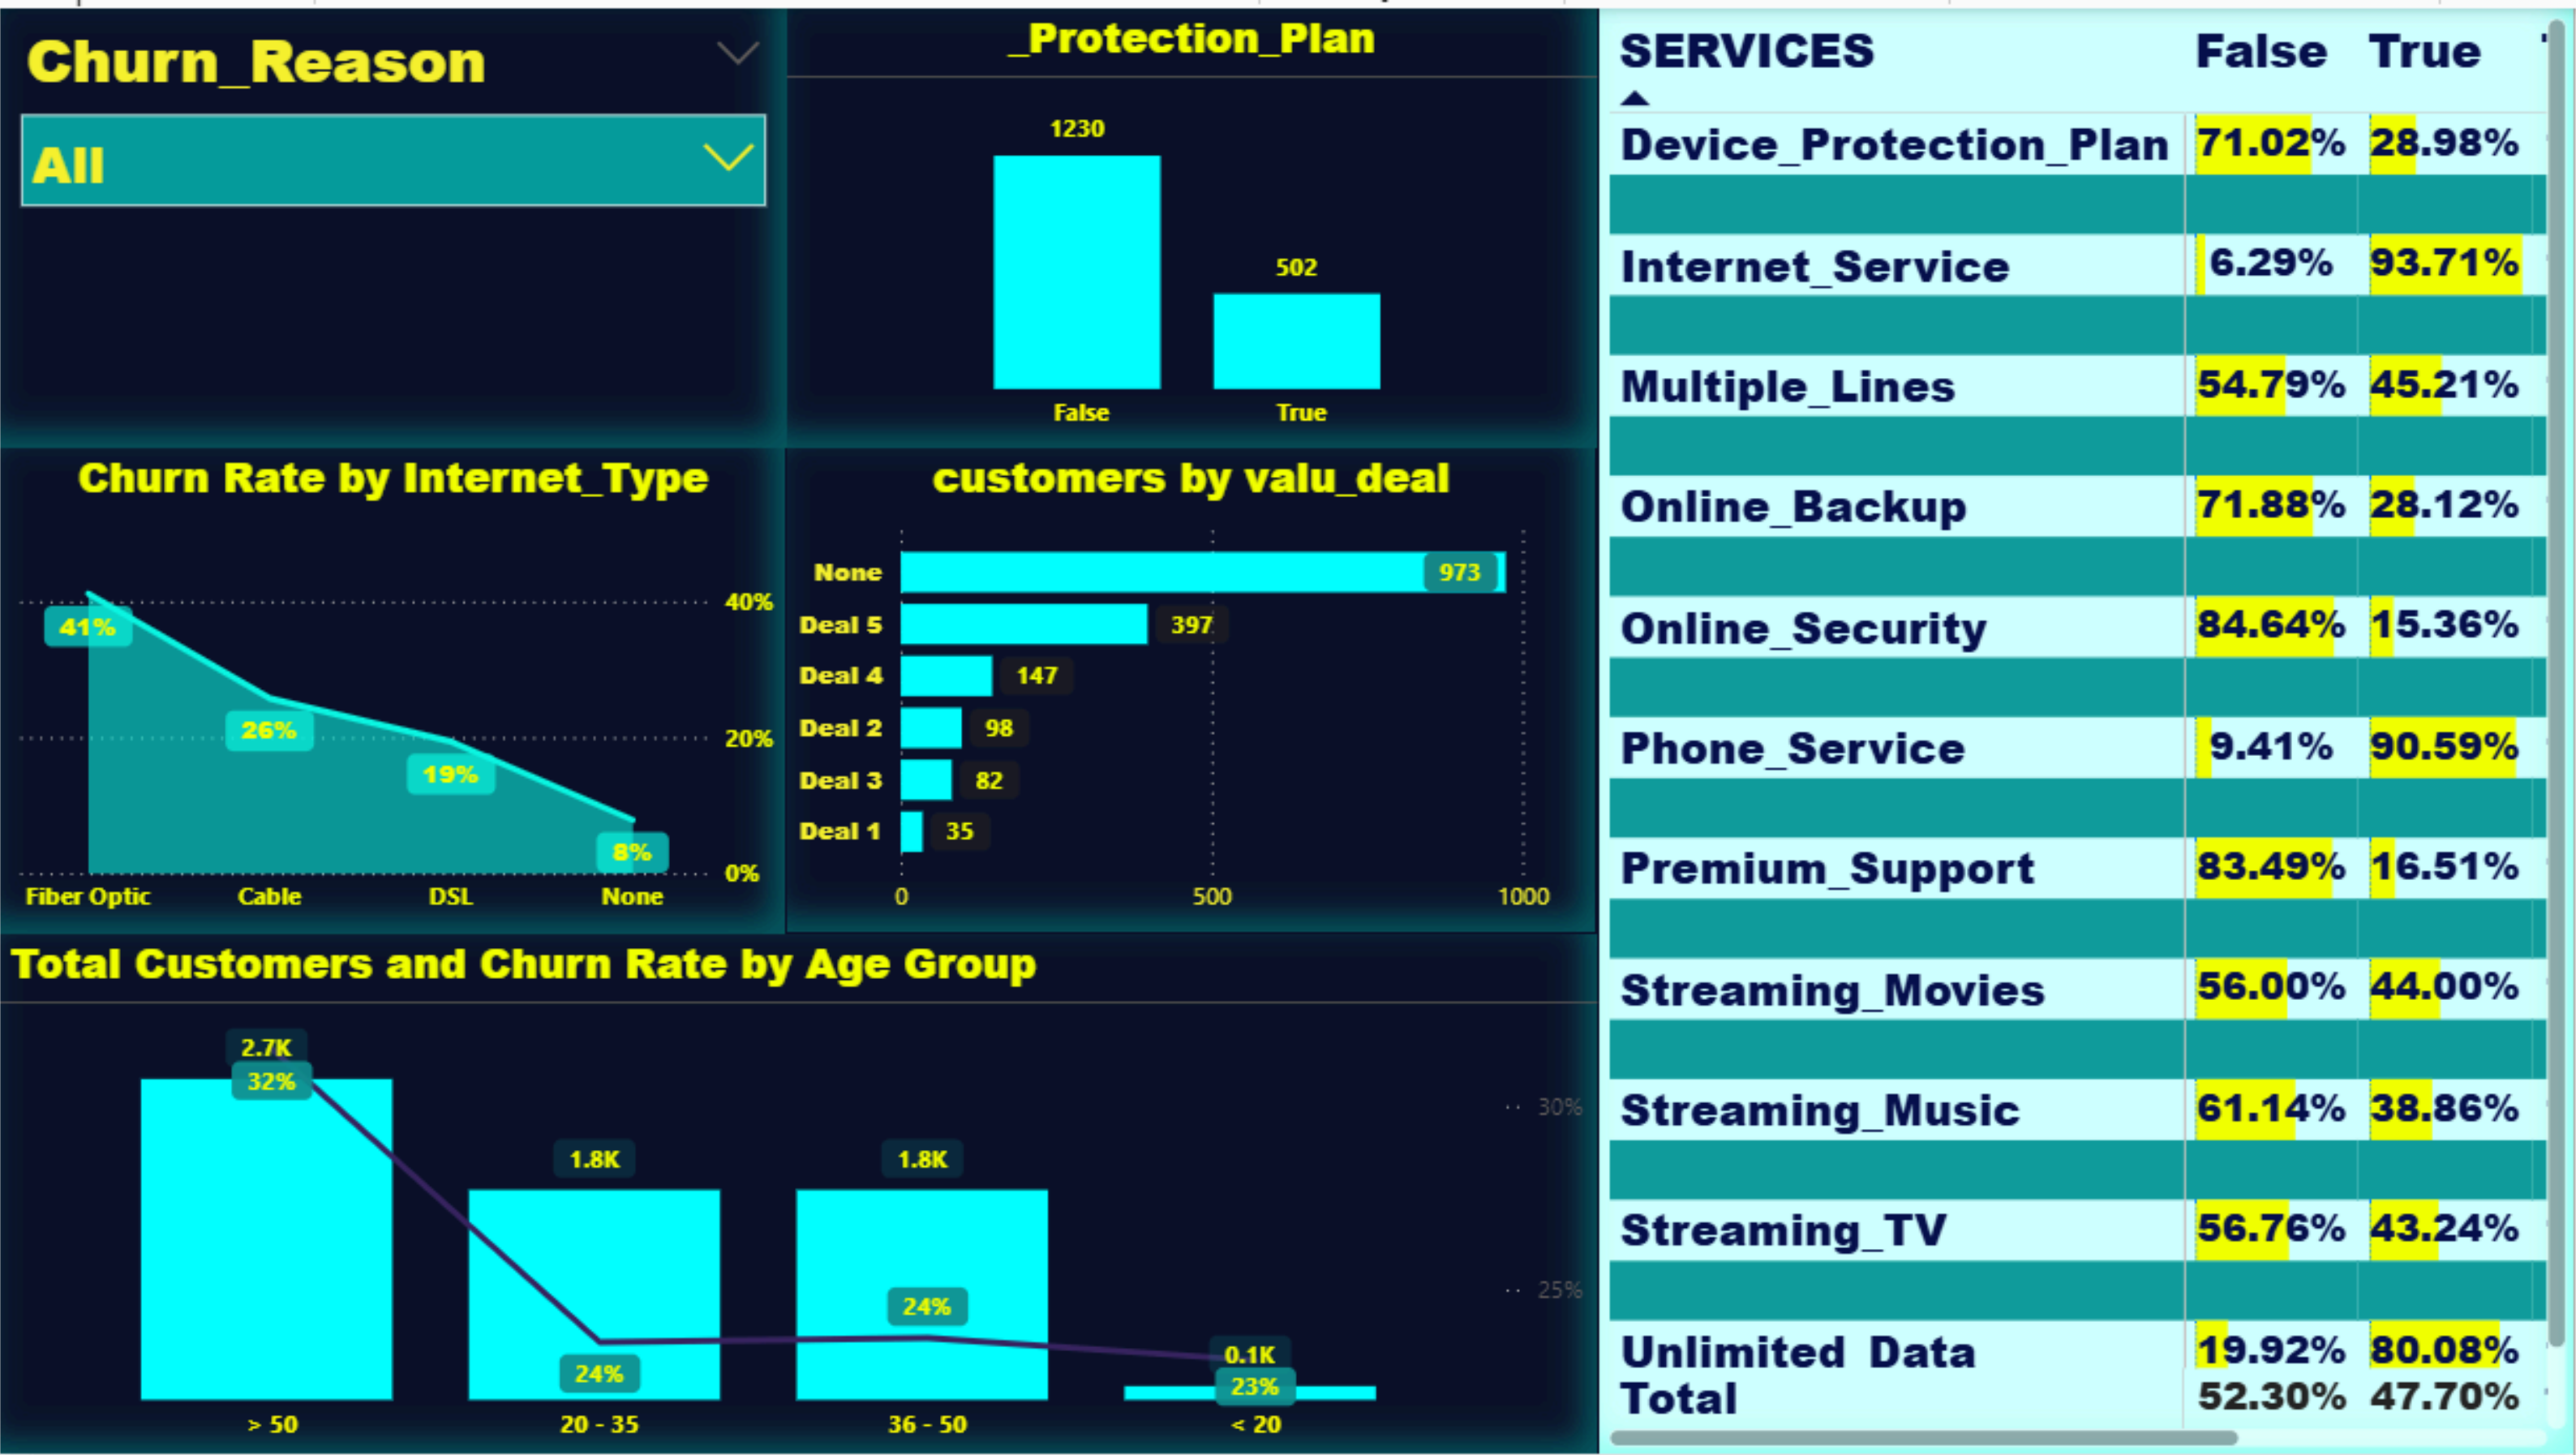

Recommendations

- I advised the company to offer discounted packages for new joiners.
- create special contracts for seniors, and improve fiber- service quality to stay competitive.
- I also suggested loyalty programs for the youth segment, as they showed the highest retention.

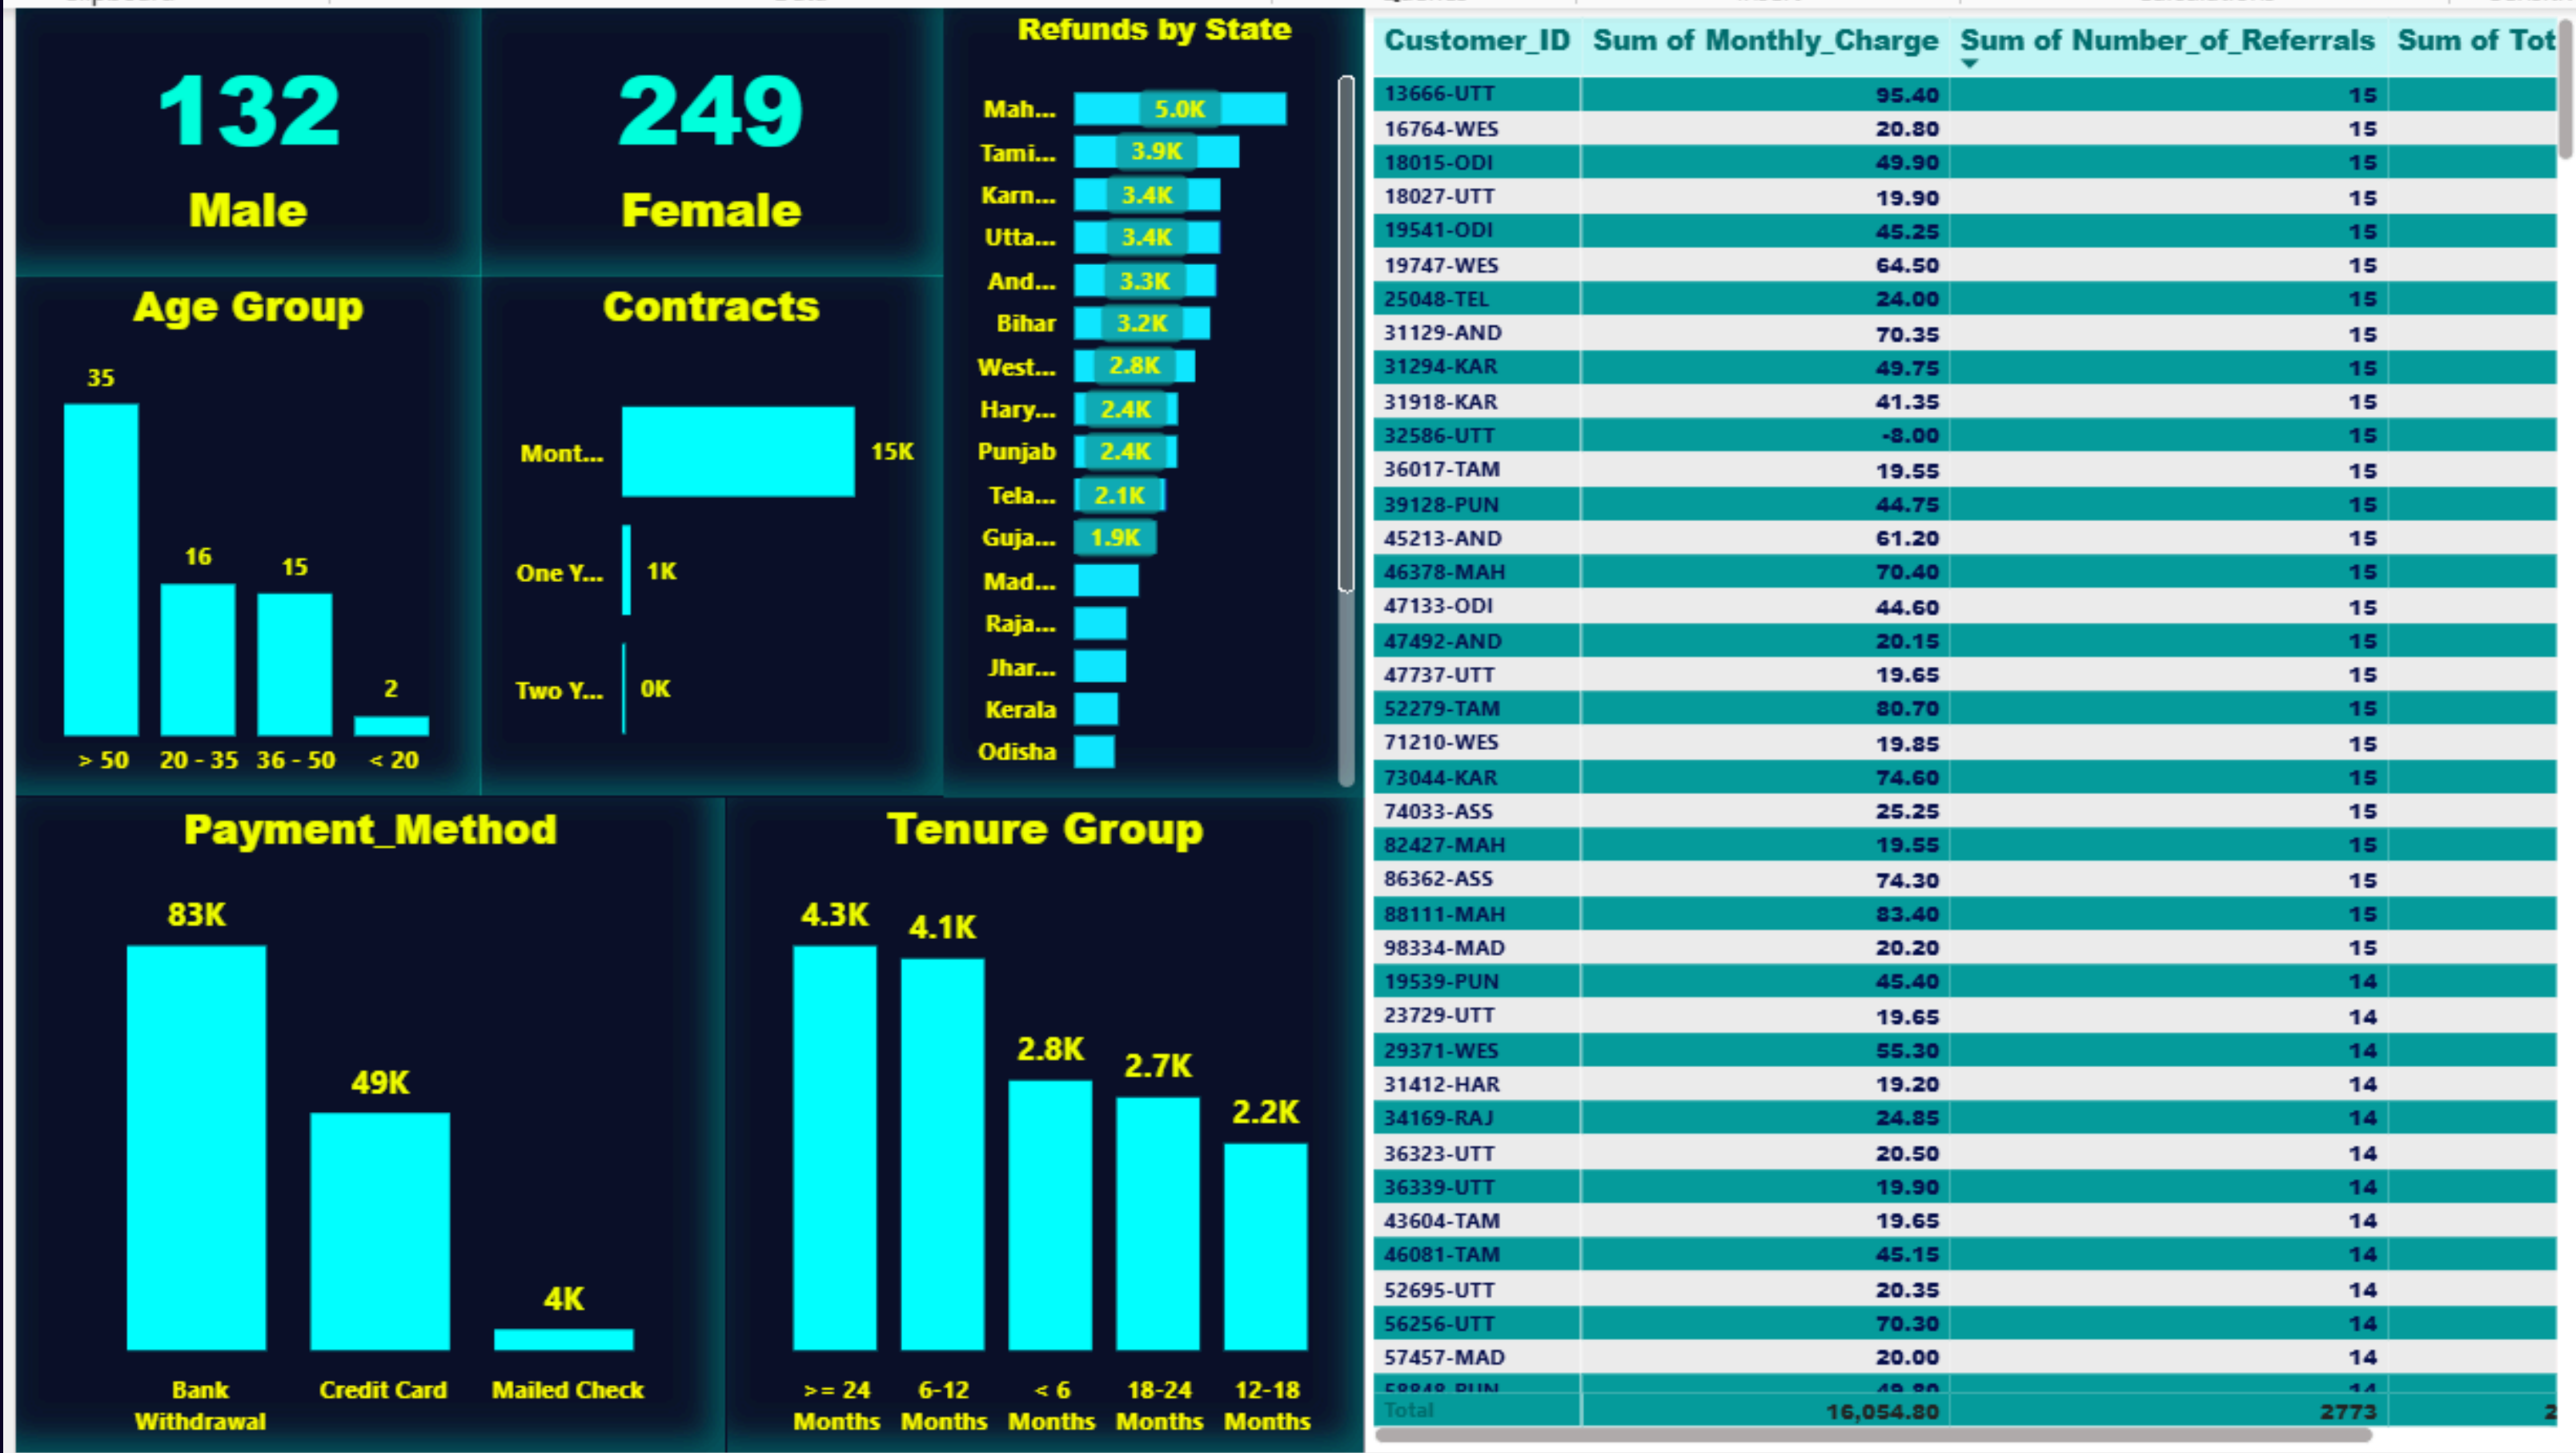

Summary Customer Churn Dashboard :

Predictive Future Churn Dashboard :

Coffee Shop Sales Analysis project (Case Study)

Analyze coffee sales data

I worked on coffee shop sales analysis project and identified the KPI Insights, total sales volume for the coffee, and the number of branches. I also determined the quantity volume and gross profit for each branch, identifying which ones are the top selling and which ones are underperforming. Additionally, I assessed performance by city

Identify KPI Insights

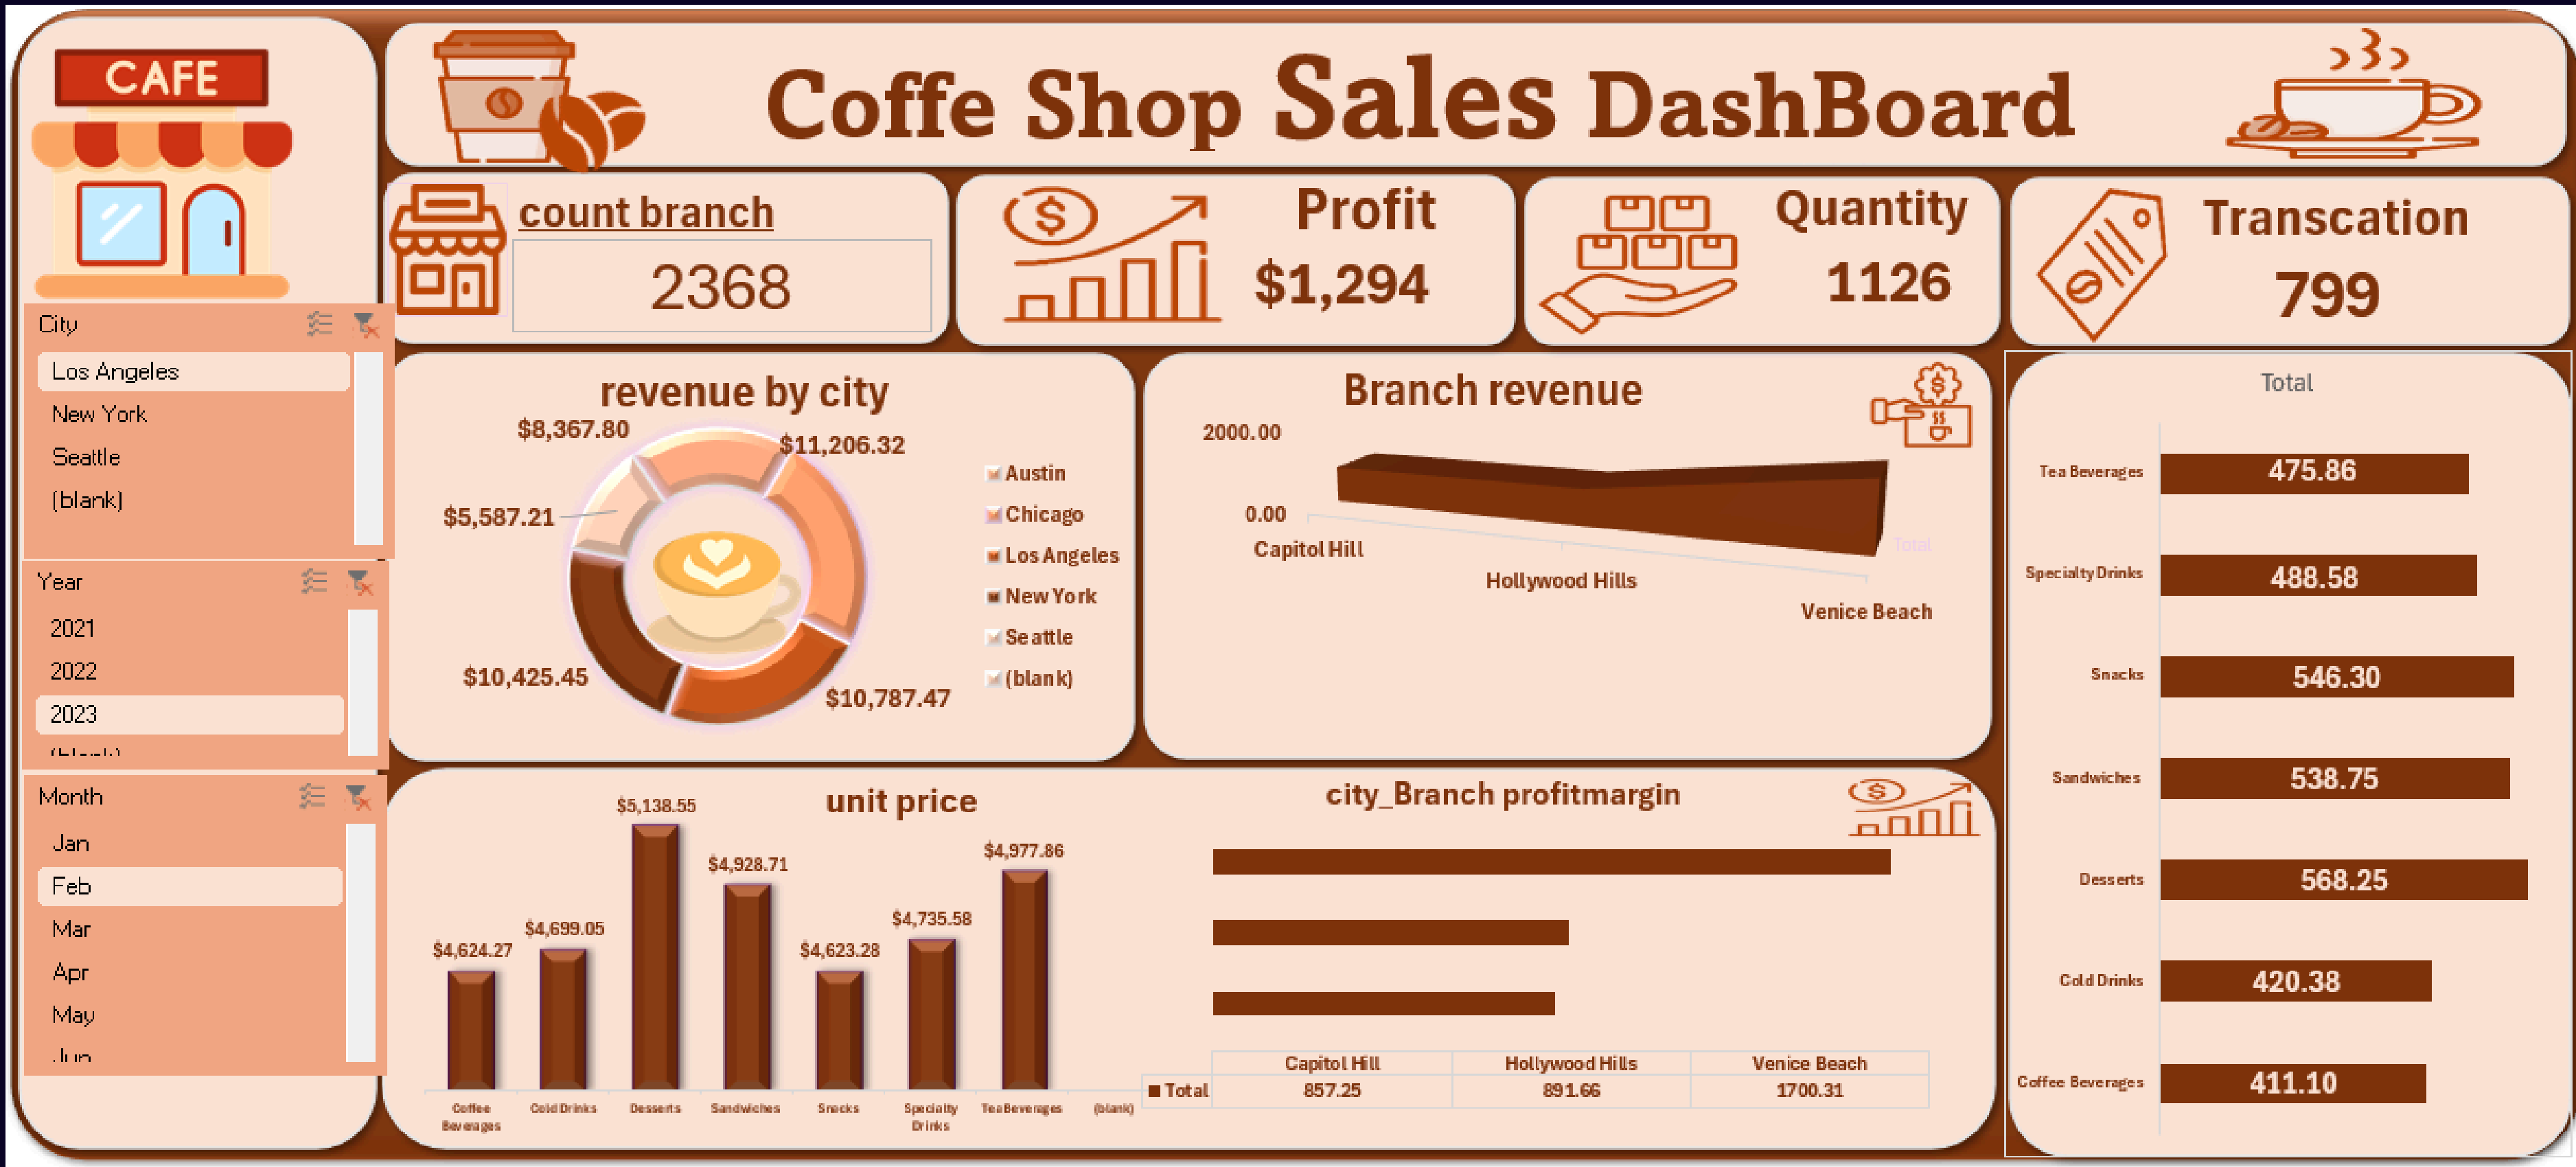

- ranked overall revenue contribution by specific city
- Desserts recorded the highest selling and most profitable category
- Cold Drinks and Coffee Beverages recorded the lowest product sales

Recommendations

- Enhancing coffee and beverage sales
- Focusing on the lowest selling branches and analyzing the success factors of high revenue locations, and replicating them in these branches
- Leveraging sales seasons to maximize profits
